

# SC 582

## Removing and Replacing the Calculator's Cover

- Always slide the keyboard end of the unit into the cover first. Never slide the display end of the unit into the cover.
- Holding the cover as shown in the illustration, slide the unit out of the cover before use. Picture.....1
- Holding the cover as shown in the illustration, slide the unit out of the cover after use. Picture.....2

## Precautions

- Don't expose the machine to direct sunlight, or extremely hot or cold temperatures, or dusty environments.
- Don't drop the machine or subject it to heavy impact.
- Use a soft cloth to clean the machine. Do not use detergents.

## Two-line Display

The two-line display makes it possible to view both the calculation formula and its result at the same time.

- The upper line shows the calculation formula.
- The lower line shows the result.

## Before Starting Calculations ...

### Modes

Application	Mode	Mode indicator	Operation
<b>Calculation Mode</b>			
Normal calculations	COMP	—	<b>MODE</b> <b>1</b>
Standard deviation calculations	SD	SD	<b>MODE</b> <b>2</b>
Regression calculations	REG	REG	<b>MODE</b> <b>3</b>
<b>Angle Unit Modes</b>			
Degrees	DEG	<b>D</b>	<b>MODE</b> <b>MODE</b> <b>1</b>
Radians	RAD	<b>R</b>	<b>MODE</b> <b>MODE</b> <b>2</b>
Grads	GRA	<b>G</b>	<b>MODE</b> <b>MODE</b> <b>3</b>
<b>Display Modes</b>			
Exponential notation (canceling FIX and SCI specification)	NORM1	—	<b>MODE</b> <b>MODE</b> <b>MODE</b> <b>3</b> <b>1</b>
	NORM2	—	<b>MODE</b> <b>MODE</b> <b>MODE</b> <b>3</b> <b>2</b>
Number of decimal place specification	FIX	Fix	<b>MODE</b> <b>MODE</b> <b>MODE</b> <b>1</b>
Number of significant digit specification	SCI	Sci	<b>MODE</b> <b>MODE</b> <b>MODE</b> <b>2</b>

### Note

- Mode indicators appear in the upper part of the display.
- The COMP, SD, and REG modes can be used in combination with the angle unit modes.
- To return the calculation mode and setup to the initial defaults shown below, press **SHIFT** **CLR** **2** (MODE) **=**  
 Calculation Mode: COMP  
 Angle Unit: Deg  
 Exponential Display Format: Norm 1  
 Fraction Display Format: a<sup>b</sup>/c  
 Decimal Point Character: Dot
- Be sure to check the current calculation mode (SD, REG, COMP) and angle unit setting (Deg, Rad, Gra) before calculating.

### MODE key operation and display

Operation	Display			Instruction
<b>MODE</b>	COMP 1	SD 2	REG 3	Press 1~3 key to select the status of Normal Calculation, Standard

				Deviation or Regression.
<b>MODE</b> <b>3</b>	Lin 1	Log 2	Exp 3	Press 1~3 key to select the status of Linear regression, Logarithmic regression or exponential regression.
<b>MODE</b> <b>3</b> <b>▶</b>	Pwr 1	Inv 2	Quad 3	Press 1~3 key to select the status of Power regression, Inverse regression or Quadratic regression.
<b>MODE</b> <b>MODE</b>	Deg 1	Rad 2	Gra 3	Press 1~3 key to select current calculating angle unit: Degrees, radians or grads.
<b>MODE</b> <b>MODE</b> <b>MODE</b>	Fix 1	Sci 2	Norm 3	Press 1~3 key to settle No. of Decimal Place specification, No. of significant Digit Specification or Exponential Notation.
<b>MODE</b> <b>MODE</b> <b>MODE</b> <b>1</b>	Fix 0~9 ?			Press 0~9 to select Decimal Place specification.
<b>MODE</b> <b>MODE</b> <b>MODE</b> <b>2</b>	Sci 0~9 ?			Press 0~9 to select No. of significant digital specification.
<b>MODE</b> <b>MODE</b> <b>MODE</b> <b>3</b>	Norm 1~2 ?			Press 1~2 to select exponential display status and exit Decimal Place Specification and Significant Digital Specification status.
<b>MODE</b> <b>MODE</b> <b>MODE</b> <b>MODE</b> <b>1</b>	ab/c 1	d/c 2		Press 1~2 to select and make sure the display mode when the calculating result is more than 1.
<b>MODE</b> <b>MODE</b> <b>MODE</b> <b>MODE</b> <b>1</b> <b>▶</b>	Dot 1	Comma 2		Press 1~2 to select the display status of Separator Symbols.

### Input Capacity

- The memory area used for calculation input can hold 79 "steps." One step is taken up each time you press a number key or arithmetic operator key (+, -, ×, ÷). A **SHIFT** or **ALPHA** key operation does not take up a step, so inputting **SHIFT** **√**, for example, takes up only one step.
- You can input up to 79 steps for a single calculation. Whenever you input the 73rd step of any calculation, the cursor changes from " " to "■" to let you know memory is running low. If you need to input more than 79 steps, you should divide your calculation into two or more parts.
- Pressing the **Ans** key recalls the last result obtained, which you can use in a subsequent calculation. See "Answer Memory" for more information about using the **Ans** key.

### Making Corrections During Input

- Use **▶** and **◀** to move the cursor to the location you want.
- Press **DEL** to delete the number or function at the current cursor position.
- Press **SHIFT** **INS** to change to an insert cursor **□**. Inputting something while the insert cursor is on the display inserts the input at the insert cursor position.
- Pressing **SHIFT** **INS**, or **=** returns to the normal cursor from the insert cursor.

### Replay Function

- Every time you perform a calculation, the replay function stores the calculation formula and its result in replay memory. Pressing the **▲** key displays the formula and result of the calculation you last performed. Pressing **▲** again back steps sequentially (new-to-old) through past calculations.
- Pressing the **▶** or **◀** key while a replay memory calculation is on the display changes to the editing screen.
- Pressing the **▶** or **◀** key immediately after you finish a calculation displays the editing screen for that calculation.
- Pressing **AC** does not clear replay memory, so you can recall the last calculation even after you press **AC**.
- Replay memory capacity is 128 bytes for storage of both expressions and results.
- Replay memory is cleared by any of the following actions.
  1. When you press the **ON** key.
  2. When you initialize modes and settings by pressing **SHIFT** **CLR** **2** (Mode) **=**.
  3. When you change from one calculation mode to another.
  4. When you turn off the calculator.

### Error Locator

- Pressing **▶** or **◀** after an error occurs displays the calculation with the cursor positioned at the location where the error occurred.

### Multi-statements

- A multi-statement is an expression that is made up of two or more smaller expressions, which are joined using a colon (:).
- Example: To add 2 + 3 and then multiply the result by 4

2 + 3 = 5. Disp  
 Ans × 4 = 20.

**Exponential Display Formats**

This calculator can display up to 10 digits. Larger values are automatically displayed using exponential notation. In the case of decimal values, you can select between two formats that determine at what point exponential notation is used. Pressing **MODE** **MODE** **MODE** **3** **1** (or **2**), press **1** to select Norm 1 or **2** for Norm 2.

- Norm 1  
 With Norm 1, exponential notation is automatically used for integer values with more than 10 digits and decimal values with more than two decimal places.
- Norm 2  
 With Norm 2, exponential notation is automatically used for integer values with more than 10 digits and decimal values with more than nine decimal places.
- All of the examples in this manual show calculation results using the Norm 1 format.

**Decimal Point and Separator Symbols**

You can use the display setup (Disp) screen to specify the symbols you want for the decimal point and 3-digit separator.

- To change the decimal point and separator symbol setting, press the **MODE** **MODE** **MODE** **MODE** **1** **▶**.
- Press the number key (**1** or **2**) that corresponds to the setting you want to use.  
**1** (Dot) : Period decimal point, comma separator  
**2** (Comma) : Comma decimal point, period separator

**Initializing the Calculator**

- Perform the following key operation when you want to initialize the calculation mode and setup, and clear replay memory and variables.  
**SHIFT** **CLR** **3** (All) **≡**

**Basic Calculations**

**Arithmetic Calculations**

- Use the COMP mode for basic calculations.
- Negative values inside of calculations must be enclosed within parentheses.  
 $\sin -1.23 \rightarrow \sin [(-) 1.23 ]$
- It is not necessary to enclose a negative exponent within parentheses.  
 $\sin 2.34 \times 10^{-5} \rightarrow \sin 2.34 [EXP] [(-) 5]$
- Example 1:  $3 \times (5 \times 10^{-9}) = 1.5 \times 10^{-8}$   
 $3 \times 5 [EXP] [(-) 9 ] = 1.5 \times 10^{-8}$
- Example 2:  $5 \times (9+7) = 80$   
 $5 \times ( 9 + 7 ) = 80.$
- You can skip all **)** operations before **=**.

**Fraction Operations**

**Fraction Calculations**

- Use the COMP mode for fraction calculations. Values are displayed in decimal format automatically whenever the total number of digits of a fractional value (integer + numerator + denominator + separator marks) exceeds 10.
- Example 1:  $\frac{2}{3} + \frac{4}{5} = 2\frac{7}{15}$   
 $2 [a/b/c] 3 + 1 [a/b/c] 4 [a/b/c] 5 = 2 \frac{7}{15}.$
- Example 2:  $\frac{2}{4} = \frac{1}{2}$   
 $2 [a/b/c] 4 = 1 \frac{1}{2}.$
- Example 3:  $\frac{1}{2} + 1.6 = 2.1$   
 $1 [a/b/c] 2 + 1.6 = 2.1$
- Results of calculations that mix fraction and decimal values are always decimal.

**Decimal ↔ Fraction Conversion**

- Example 1:  $2.75 = 2\frac{3}{4}$  (Decimal ↔ Fraction)  
 $2.75 = 2.75$   
 $[a/b/c]$   $2 \frac{3}{4}.$   
**SHIFT** **d/c**  $11 \frac{3}{4}.$
- Example 2:  $\frac{1}{2} \leftrightarrow 0.5$  (Fraction ↔ Decimal)  
 $1 [a/b/c] 2 = 1 \frac{1}{2}.$   
 $[a/b/c]$   $0.5$   
 $[a/b/c]$   $1 \frac{1}{2}.$

**Mixed Fraction ↔ Improper Fraction Conversion**

- Example:  $1\frac{2}{3} \leftrightarrow \frac{5}{3}$   
 $1 [a/b/c] 2 [a/b/c] 3 = 1 \frac{2}{3}.$   
**SHIFT** **d/c**  $5 \frac{1}{3}.$   
**SHIFT** **d/c**  $1 \frac{2}{3}.$

- You can use the display setup (Disp) screen to specify the display format when a fraction calculation result is greater than one. Pressing **MODE** **MODE** **MODE** **MODE** **1**.
- Press the number key (**1** or **2**) that corresponds to the setting you want to use.  
**1** (a/b/c) :Mixed fraction  
**2** (d/c) :Improper fraction
- An error occurs if you try to input a mixed fraction while the d/c display format is selected.

**Percentage Calculations**

- Use the COMP mode for percentage calculations.
- Example 1: To calculate 12% of 1500 (180)  
 $1500 \times 12 [SHIFT] \% = 180.$
- Example 2: To calculate what percentage of 880 is 660 (75%)  
 $660 \div 880 [SHIFT] \% = 75.$
- Example 3: To add 15% onto 2500 (2875)  
 $2500 \times 15 [SHIFT] \% + = 2,875.$
- Example 4: To discount 3500 by 25% (2625)  
 $3500 \times 25 [SHIFT] \% - = 2,625.$
- Example 5: If 300 grams are added to a test sample originally weighing 500 grams, what is the percentage increase in weight? (160%)  
 $300 + 500 [SHIFT] \% = 160.$
- Example 6: If the temperature changes from 40°C to 46°C, what percentage did it rise? How about to 48°C? (15%, 20%)  
 $46 - 40 [SHIFT] \% = 15.$   
 $\leftarrow \leftarrow \leftarrow \leftarrow \leftarrow 8 = 20.$

**Degrees, Minutes, Seconds Calculations**

- You can perform sexagesimal calculations using degrees (hours), minutes, and seconds, and convert between sexagesimal and decimal values.
- Example 1: To convert the decimal value 2.258 to a sexagesimal value and then back to a decimal value.  
 $2.258 = 2.258$   
**SHIFT** **° ' "**  $2^{\circ} 15' 22.8$   
 $^{\circ} ' "$   $2.258$
- Example 2: To perform the following calculation:  
 $12^{\circ} 34' 56'' \times 3.45$   
 $12 [^{\circ} ' "] 34 [^{\circ} ' "] 56 [^{\circ} ' "] \times 3.45 = 43.40866667$

**FIX, SCI, RND**

- Example 1:  $200 \div 7 \times 14 = 400.$   
 $200 \div 7 \times 14 = 400.$   
**MODE** **MODE** **MODE** **1** **3**  $400.000$   
 (Internal calculation  $200 \div 7 = 28.571$ )  
 continues using 12 digits.)  $\times 14 = 400.000$   
 The following performs the same calculation using the specified number of decimal places.  
 $200 \div 7 = 28.571$   
 (Internal rounding ) **SHIFT** **Rnd**  $28.571$   
 $\times 14 = 399.994$

- Press **MODE** **MODE** **MODE** **3** **1** to clear the Fix specification.
- Example 2:  $1 \div 3$ , displaying result with two significant digits (Sci 2).  
**MODE** **MODE** **MODE** **2** **2**

$$1 \div 3 = 0.3333333333$$

- Press **MODE** **MODE** **MODE** **3** **1** to clear the Sci specification.

## Memory Calculations

### Answer Memory

- Whenever you press **=** after inputting values or an expression, the calculated result automatically updates Answer Memory contents by storing the result.
- In addition to **=**, Answer Memory contents are also updated with result whenever you press **SHIFT** **%**, **M+**, **SHIFT** **M-** or **SHIFT** **STO** followed by a letter (A through F, or M, X, or Y).
- You can recall Answer Memory contents by pressing **Ans**.
- Answer Memory can store up to 12 digits for the mantissa and two digits for the exponent.
- Answer Memory contents are not updated if the operation performed by any of the above key operations results in an error.

### Consecutive Calculations

- You can use the calculation result that is currently on the display (and also stored in Answer Memory) as the first value of your next calculation. Note that pressing an operator key while a result is displayed causes the displayed value to change to Ans, indicating it is the value that is currently stored in Answer Memory.
- The result of a calculation can also be used with a subsequent Type A function ( $x^2$ ,  $x^3$ ,  $x^{-1}$ ,  $x!$ ),  $+$ ,  $-$ ,  $^$ ,  $^{\wedge}(x^y)$ ,  $\sqrt{x}$ ,  $\times$ ,  $\div$ ,  $nPr$ ,  $nCr$  and  $\circ$ .

### Independent Memory

- Values can be input directly into memory, added to memory, or subtracted from memory. Independent memory is convenient for calculating cumulative totals.
- Independent memory uses the same memory area as variable M.
- To clear independent memory (M), input **0** **SHIFT** **STO** **M** (M+).
- Example:
 

$23 + 9 = 32$	$23$ <b>+</b> <b>9</b> <b>SHIFT</b> <b>STO</b> <b>M</b>	<div style="border: 1px solid black; padding: 2px; display: inline-block;">32.</div>
$53 - 6 = 47$	$53$ <b>-</b> <b>6</b> <b>M+</b>	<div style="border: 1px solid black; padding: 2px; display: inline-block;">47.</div>
$45 \times 2 = 90$	$45$ <b>\times</b> <b>2</b> <b>SHIFT</b> <b>M</b>	<div style="border: 1px solid black; padding: 2px; display: inline-block;">90.</div>
(Total) -11	<b>RCL</b> <b>M</b>	<div style="border: 1px solid black; padding: 2px; display: inline-block;">-11.</div>

### Variables

- There are nine variables (A through F, M, X and Y), which can be used to store data, constants, results, and other values.
- Use the following operation to delete data assigned to a particular variable: **0** **SHIFT** **STO** **A**. This operation deletes the data assigned to variable A.
- Perform the following key operation when you want to clear the values assigned to all of the variables.

$$\text{SHIFT} \text{CLR} 1 \text{MCL} =$$

- Example:  $193.2 \div 23 = 8.4$

$$193.2 \div 28 = 6.9$$

$$193.2 \text{ SHIFT } \text{STO} \text{ A } \div 23 = \text{8.4}$$

$$\text{ALPHA} \text{ A } \div 28 = \text{6.9}$$

## Scientific Function Calculations

- Use the COMP mode for Scientific Function calculations.
- Certain types of calculations may take a long time to complete.
- Wait for the result to appear on the display before starting the next calculation.
- $\pi = 3.14159265359$

### Trigonometric/Inverse Trigonometric Functions

- To change the default angle unit (degrees, radians, grads), press the **MODE** **MODE**. Press the number key (**1**, **2** or **3**) that corresponds to the angle unit you want to use.

$$(90^\circ = \pi / 2 \text{ radians} = 100 \text{ grads})$$

- Example 1:  $\sin 63^\circ 52' 41'' = 0.897859012$

$$\text{MODE} \text{MODE} 1 \rightarrow \text{D}$$

$$\text{Sin} 63 \text{ } \circ \text{ ' ' } 52 \text{ } \circ \text{ ' ' } 41 \text{ } \circ \text{ ' ' } = \text{0.897859012}$$

- Example 2:  $\cos\left(\frac{\pi}{3}\right) = 0.5$

$$\text{MODE} \text{MODE} 2 \rightarrow \text{R}$$

$$\text{Cos} \text{ ( } \text{SHIFT} \text{ } \pi \text{ ) } \div 3 \text{ ) } = \text{0.5}$$

- Example 3:  $\cos^{-1} \frac{\sqrt{2}}{2} = 0.25 \pi \text{ (rad)} = \frac{\pi}{4} \text{ (rad)}$

$$\text{MODE} \text{MODE} 2 \rightarrow \text{R}$$

$$\text{SHIFT} \text{cos}^{-1} \text{ ( } \sqrt{2} \text{ ) } \div 2 \text{ ) } = \text{Ans} \div \text{SHIFT} \text{ } \pi =$$

$$\text{0.25}$$

- Example 4:  $\tan^{-1} 0.741 = 36.53844577^\circ$

$$\text{MODE} \text{MODE} 1 \rightarrow \text{D}$$

$$\text{SHIFT} \text{tan}^{-1} 0.741 = \text{36.53844577}$$

### Hyperbolic/Inverse Hyperbolic Functions

- Example 1:  $\sinh 3.6 = 18.28545536$

$$\text{hyp} \text{sin} 3.6 = \text{18.28545536}$$

- Example 2:  $\sinh^{-1} 30 = 4.094622224$

$$\text{hyp} \text{SHIFT} \text{sin}^{-1} 30 = \text{4.094622224}$$

### Common and Natural Logarithms/ Antilogarithms

- Example 1:  $\log 1.23 = 0.089905111$

$$\text{log} 1.23 = \text{0.089905111}$$

- Example 2:  $\ln 90 (= \log_e 90) = 4.49980967$

$$\text{ln} 90 = \text{4.49980967}$$

$$\ln e = 1$$

$$\text{ln} \text{ALPHA} e = \text{1.}$$

- Example 3:  $e^{10} = 22026.46579$

$$\text{SHIFT} \text{e}^{x} 10 = \text{22,026.46579}$$

- Example 4:  $10^{1.5} = 31.6227766$

$$\text{SHIFT} 10^x 1.5 = \text{31.6227766}$$

- Example 5:  $2^4 = 16$

$$2 \wedge 4 = \text{16.}$$

### Square Roots, Cube Roots, Roots, Squares, Cubes, Reciprocals, Factorials, Random Numbers, $\pi$ , and Permutation/Combination

- Example 1:  $\sqrt{2} + \sqrt{3} \times \sqrt{5} = 5.287196909$

$$\sqrt{\text{2}} + \sqrt{\text{3}} \times \sqrt{\text{5}} = \text{5.287196909}$$

- Example 2:  $\sqrt[3]{5 + \sqrt{-27}} = -1.290024053$

$$\text{SHIFT} \sqrt[3]{\text{5} + \text{SHIFT} \sqrt{-27}} = \text{-1.290024053}$$

- Example 3:  $\sqrt[7]{123} (= 123^{\frac{1}{7}}) = 1.988647795$

$$7 \text{SHIFT} \sqrt[7]{\text{123}} = \text{1.988647795}$$

- Example 4:  $123 + 30^2 = 1023$

$$123 + 30 \text{X}^2 = \text{1,023.}$$

- Example 5:  $12^3 = 1728$

$$12 \text{X}^3 = \text{1,728.}$$

- Example 6:  $\frac{1}{\frac{1}{3} - \frac{1}{4}} = 12$

$$\text{( } 3 \text{X}^{-1} \text{ - } 4 \text{X}^{-1} \text{ ) } \text{X}^{-1} = \text{12.}$$

- Example 7:  $8! = 40320$

$$8 \text{SHIFT} \text{X}! = \text{40,320.}$$

- Example 8: To generate a random number between 0.000 and 0.999

$$\text{SHIFT} \text{Ran}\# = \text{0.664}$$

(The above value is a sample only. Result)

- Example 9:  $3 \pi = 9.424777961$

$$3 \text{SHIFT} \pi = \text{9.424777961}$$

- Example 10: To determine how many different 4-digit values can be produced using the numbers 1 through 7 Numbers cannot be duplicated within the same 4-digit value (1234 is allowed, but 1123 is not). (840)

$$7 \text{SHIFT} \text{nPr} 4 = \text{840.}$$

- Example 11: To determine how many different 4-member groups can be organized in a group of 10 individuals (210)

$$10 \text{nCr} 4 = \text{210.}$$

### Angle Unit Conversion

- Press **SHIFT** **DRG** to display the following menu.

D	R	G
1	2	3

- Pressing **1**, **2** or **3** converts the displayed value to the corresponding angle unit.

- Example: To convert 4.25 radians to degrees.

$$\text{MODE} \text{ MODE } \text{ 1 } \rightarrow \text{ (D) } \begin{array}{|l} 4.25\text{r} \\ 243.5070629 \end{array}$$

$$4.25 \text{ SHIFT } \text{ DRG } \text{ 2 } \text{ (R) } =$$

### ■ Coordinate Conversion (Pol (x, y), Rec (r, θ))

- Calculation results are automatically assigned to variables E and F.

- Example 1: To convert polar coordinates (r=2, θ=60°) to rectangular coordinates (x, y) (Deg).

$$x=1 \quad \text{SHIFT} \text{ Rec } \text{ 2 } \text{ , } \text{ 60 } \text{ ) } = \quad \text{ 1.}$$

$$y=1.732050808 \quad \text{RCL} \text{ F} \quad \text{ 1.732050808}$$

- Press **RCL** **E** to display the value of x, or **RCL** **F** to display the value of y.

- Example 2: To convert rectangular coordinates (1, √3) to polar coordinates (r, θ) (Rad).

$$r=2 \quad \text{Pol} \text{ ( } \text{ 1 } \text{ , } \sqrt{\text{ 3 }} \text{ ) } =$$

$$\theta = 1.047197551 \quad \text{RCL} \text{ F} \quad \text{ 1.047197551}$$

- Press **RCL** **E** to display the value of r or **RCL** **F** to display the value of θ.

### ■ Engineering Notation Calculations

- Example 1: To convert 56,088 meters to kilometers

$$56088 = \text{ENG} \quad \text{ 56.088}_{\times 10^{-03}}$$

- Example 2: To convert 0.08125 grams to milligrams

$$0.08125 = \text{ENG} \quad \text{ 81.25}_{\times 10^{-03}}$$

## Statistical Calculations

### ■ Standard Deviation

- Press **MODE** **2** to enter the SD Mode for statistical calculations using standard deviation.

- Always start data input with **SHIFT** **CLR** **1** (Scl) **=** to clear statistical memory.

- Input data using the key sequence shown below.

$$\langle x - \text{data} \rangle \text{ DT}$$

- Input data is used to calculate values for n, Σx, Σx<sup>2</sup>,  $\bar{x}$ , σ n and σ n-1, which you can recall using the key operations noted nearby.

To recall this type of value:	Perform this key operation:
Σ x <sup>2</sup>	<b>SHIFT</b> <b>S-SUM</b> <b>1</b>
Σ x	<b>SHIFT</b> <b>S-SUM</b> <b>2</b>
n	<b>SHIFT</b> <b>S-SUM</b> <b>3</b>
$\bar{x}$	<b>SHIFT</b> <b>S-VAR</b> <b>1</b>
σ n	<b>SHIFT</b> <b>S-VAR</b> <b>2</b>
σ n-1	<b>SHIFT</b> <b>S-VAR</b> <b>3</b>

- Example: To calculate σ n-1, σ n,  $\bar{x}$ , n, Σx and Σx<sup>2</sup> for the following data: 55, 54, 51, 55, 53, 53, 54, 52.

In the SD Mode:

$$\text{SHIFT} \text{ CLR } \text{ 1 } \text{ (Scl) } = \text{ (Stat clear)}$$

$$55 \text{ DT} \quad \text{ n= SD } \text{ 1.}$$

Each time you press **DT** to register your input, the number of data input up to that point is indicated on the display (n value).

$$54 \text{ DT} \quad 51 \text{ DT} \quad 55 \text{ DT} \quad \text{ n= SD } \text{ 8.}$$

$$53 \text{ DT} \quad 54 \text{ DT} \quad 52 \text{ DT} \quad \text{ Sample Standard Deviation } (\sigma \text{ n-1}) = 1.407885953$$

$$\text{SHIFT} \text{ S-VAR } \text{ 3 } = \quad \text{ 1.407885953}$$

$$\text{Population Standard Deviation } (\sigma \text{ n}) = 1.316956719$$

$$\text{SHIFT} \text{ S-VAR } \text{ 2 } = \quad \text{ 1.316956719}$$

$$\text{Arithmetic Mean } (\bar{x}) = 53.375$$

$$\text{SHIFT} \text{ S-VAR } \text{ 1 } = \quad \text{ 53.375}$$

$$\text{Number of Data } (n) = 8$$

$$\text{SHIFT} \text{ S-SUM } \text{ 3 } = \quad \text{ 8.}$$

$$\text{Sum of Values } (\Sigma x) = 427$$

$$\text{SHIFT} \text{ S-SUM } \text{ 2 } = \quad \text{ 427.}$$

$$\text{Sum of Squares of Values } (\Sigma x^2) = 22805$$

$$\text{SHIFT} \text{ S-SUM } \text{ 1 } = \quad \text{ 22,805.}$$

### Data Input Precautions

- **DT** **DT** inputs the same data twice.

- You can also input multiple entries of the same data using **SHIFT** **□**. To input the data 110 ten times, for example, press 110 **SHIFT** **□** **10** **DT**.

- You can perform the above key operations in any order, and not necessarily that shown above.

- While inputting data or after inputting data is complete, you can use the **▲** and **▼** keys to scroll through data you have input. If you input multiple entries of the same data using **SHIFT** **□** to specify the data frequency (number of data items) as described above, scrolling through data shows both the data item and a separate screen for the data frequency (Freq).

You can then edit the displayed data, if you want. Input the new value and then press the **=** key to replace the old value with the new one.

- Pressing the **DT** key instead of **=** after changing a value on the display registers the value you input as a new data item, and leaves the old value as it is.

- You can delete a data value displayed using **▲** and **▼** by pressing **SHIFT** **CL**. Deleting a data value causes all values following it to be shifted up.

- Data values you register are normally stored in calculator memory. The message "Data Full" appears and you will not be able to input any more data if there is no memory left for data storage. If this happens, press the **=** key to display the screen shown below.

$$\begin{array}{|c|c|} \hline \text{Edit OFF} & \text{ESC} \\ \hline \text{1} & \text{2} \\ \hline \end{array}$$

Press **2** to exit data input without registering the value you just input.

Press **1** if you want to register the value you just input, without saving it in memory. If you do this, however, you will not be able to display or edit any of the data you have input.

- To delete data you have just input, press **SHIFT** **CL**.

### ■ Regression Calculations

- Press **MODE** **3** to enter the REG Mode and then select one of the following regression types (**1** **2** or **3**).

$$\begin{array}{|c|} \hline \text{1} \text{ (Lin) : Linear regression} \\ \hline \text{2} \text{ (Log) : Logarithmic regression} \\ \hline \text{3} \text{ (Exp) : Exponential regression} \\ \hline \text{▶ 1} \text{ (Pwr) : Power regression} \\ \hline \text{▶ 2} \text{ (Inv) : Inverse regression} \\ \hline \text{▶ 3} \text{ (Quad) : Quadratic regression} \\ \hline \end{array}$$

- Always start data input with **SHIFT** **CLR** **1** (Scl) **=** to clear statistical memory.

- Input data using the key sequence shown below.

$$\langle x - \text{data} \rangle, \langle y - \text{data} \rangle \text{ DT}$$

- The values produced by a regression calculation depend on the values input, and results can be recalled using the key operations shown in the table below.

To recall this type of value:	Perform this key operation:
Σ x <sup>2</sup>	<b>SHIFT</b> <b>S-SUM</b> <b>1</b>
Σ x	<b>SHIFT</b> <b>S-SUM</b> <b>2</b>
n	<b>SHIFT</b> <b>S-SUM</b> <b>3</b>
Σ y <sup>2</sup>	<b>SHIFT</b> <b>S-SUM</b> <b>▶ 1</b>
Σ y	<b>SHIFT</b> <b>S-SUM</b> <b>▶ 2</b>
Σ x y	<b>SHIFT</b> <b>S-SUM</b> <b>▶ 3</b>
Σ x <sup>3</sup>	<b>SHIFT</b> <b>S-SUM</b> <b>▶▶ 1</b>
Σ x <sup>2</sup> y	<b>SHIFT</b> <b>S-SUM</b> <b>▶▶ 2</b>
Σ x <sup>4</sup>	<b>SHIFT</b> <b>S-SUM</b> <b>▶▶ 3</b>
$\bar{x}$	<b>SHIFT</b> <b>S-VAR</b> <b>1</b>
x σ n	<b>SHIFT</b> <b>S-VAR</b> <b>2</b>
σ n-1	<b>SHIFT</b> <b>S-VAR</b> <b>3</b>
$\bar{y}$	<b>SHIFT</b> <b>S-VAR</b> <b>▶ 1</b>
y σ n	<b>SHIFT</b> <b>S-VAR</b> <b>▶ 2</b>
y σ n-1	<b>SHIFT</b> <b>S-VAR</b> <b>▶ 3</b>
Regression coefficient A	<b>SHIFT</b> <b>S-VAR</b> <b>▶▶ 1</b>
Regression coefficient B	<b>SHIFT</b> <b>S-VAR</b> <b>▶▶ 2</b>
Regression calculation other than quadratic regression	
Correlation coefficient r	<b>SHIFT</b> <b>S-VAR</b> <b>▶▶▶ 3</b>
$\hat{x}$	<b>SHIFT</b> <b>S-VAR</b> <b>▶▶▶ 1</b>
$\hat{y}$	<b>SHIFT</b> <b>S-VAR</b> <b>▶▶▶ 2</b>

- The following table shows the key operations you should use to recall results in the case of quadratic regression.

To recall this type of value:	Perform this key operation:
Regression coefficient C	<b>SHIFT</b> <b>S-VAR</b> <b>▶▶▶ 3</b>
$\hat{x}$ 1	<b>SHIFT</b> <b>S-VAR</b> <b>▶▶▶▶ 1</b>

$\hat{x}^2$	<b>SHIFT</b> <b>S-VAR</b> <b>▶▶▶▶</b> <b>2</b>
$\hat{y}$	<b>SHIFT</b> <b>S-VAR</b> <b>▶▶▶▶</b> <b>3</b>

- The values in the above tables can be used inside of expressions the same way you use variables.

### Linear Regression

The regression formula for linear regression is:  $y = A+Bx$ .

- Example: Atmospheric Pressure vs. Temperature

Temperature	Atmospheric Pressure
10°C	1003hPa
15°C	1005hPa
20°C	1010hPa
25°C	1011hPa
30°C	1014hPa

Perform linear regression to determine the regression formula terms and correlation coefficient for the data nearby. Next, use the regression formula to estimate atmospheric pressure at 18°C and temperature at 1000 hPa. Finally, calculate the coefficient of

determination  $r^2$  and sample covariance  $\left( \frac{\sum xy - n \cdot \bar{x} \cdot \bar{y}}{n-1} \right)$ .

In the REG Mode:

**MODE** **3** **1** (Lin)

**SHIFT** **CLR** **1** (Scl) **=** (Stat clear)

10 **.** 1003 **DT**

**REG** **n=** 1.

Each time you press **DT** to register your input, the number of data input up to that point is indicated on the display (n value).

15 **.** 1005 **DT** 20 **.** 1010 **DT**

**REG** **n=** 5.

25 **.** 1011 **DT** 30 **.** 1014 **DT**

Regression Coefficient A=997.4

**SHIFT** **S-VAR** **▶▶▶** **1** **=**

997.4

Regression Coefficient B=0.56

**SHIFT** **S-VAR** **▶▶▶** **2** **=**

0.56

Correlation Coefficient  $r = 0.982607368$

**SHIFT** **S-VAR** **▶▶▶** **3** **=**

0.982607368

Atmospheric Pressure at 18°C =1007.48

18 **SHIFT** **S-VAR** **▶▶▶** **2** **=**

1,007.48

Temperature at 1000 hPa =4.642857143

1000 **SHIFT** **S-VAR** **▶▶▶** **1** **=**

4.642857143

Coefficient of Determination =0.965517241

**SHIFT** **S-VAR** **▶▶▶** **3** **x<sup>2</sup>** **=**

0.965517241

Sample Covariance =35

**(** **SHIFT** **S-SUM** **▶▶** **3** **-**

**SHIFT** **S-SUM** **▶▶** **3** **×** **SHIFT** **S-VAR** **▶▶▶** **1** **×**

**SHIFT** **S-VAR** **▶▶▶** **1** **)** **÷**

**(** **SHIFT** **S-SUM** **▶▶** **3** **-** **1** **)** **=**

35.

### Logarithmic, Exponential, Power, and Inverse Regression

- Use the same key operations as linear regression to recall results for these types of regression.
- The following shows the regression formulas for each type of regression.

Logarithmic Regression	$y = A+B \cdot \ln x$
Exponential Regression	$y=A \cdot e^{B \cdot x}$ (ln y=ln A+B x)
Power Regression	$y=A \cdot x^B$ (ln y=ln A+B ln x)
Inverse Regression	$y=A+B \cdot 1/x$

### Quadratic Regression

- The regression formula for quadratic regression is:  $y=A+Bx+Cx^2$
- Example:

xi	yi
29	1.6
50	23.5
74	38.0
103	46.4

118	48.0
-----	------

Perform quadratic regression to determine the regression formula terms for the data nearby. Next, use the regression formula to estimate the values for  $\hat{y}$  (estimated value of y) for  $x_i=16$  and  $\hat{x}$  (estimated value of x) for  $y_i=20$

In the REG Mode:

**MODE** **3** **▶▶** **3** (Quad)

**SHIFT** **CLR** **1** (Scl) **=** (Stat clear)

29 **.** 1.6 **DT** 50 **.** 23.5 **DT**

74 **.** 38.0 **DT** 103 **.** 46.4 **DT**

**REG** **n=** 5.

118 **.** 48.0 **DT**

Regression Coefficient A= -35.59856934

**SHIFT** **S-VAR** **▶▶▶** **1** **=**

-35.59856934

Regression Coefficient B=1.495939413

**SHIFT** **S-VAR** **▶▶▶** **2** **=**

1.495939413

Regression Coefficient C=-6.71629667 × 10<sup>-3</sup>

**SHIFT** **S-VAR** **▶▶▶** **3** **=**

-6.71629667 × 10<sup>-3</sup>

$\hat{y}$  when  $x_i$  is 16 = -13.38291067

16 **SHIFT** **S-VAR** **▶▶▶** **3** **=**

-13.38291067

$\hat{x}$  1 when  $y_i$  is 20 =47.14556728

20 **SHIFT** **S-VAR** **▶▶▶** **1** **=**

47.14556728

$\hat{x}$  2 when  $y_i$  is 20 =175.5872105

20 **SHIFT** **S-VAR** **▶▶▶** **2** **=**

175.5872105

### Data Input Precautions

- DT** **DT** inputs the same data twice.
- You can also input multiple entries of the same data using **SHIFT** **:**. To input the data “20 and 30” five times, for example, press 20 **.** 30 **SHIFT** **:** 5 **DT**.
- The above results can be obtained in any order, and not necessarily that shown above.
- Precautions when editing data input for standard deviation also apply for regression calculations.

### Technical Information

#### When you have a problem.....

If calculation results are not what you expect or if an error occurs, perform the following steps.

- Press **SHIFT** **CLR** **2** (Mode) **=** to initialize all modes and settings.
- Check the formula you are working with to confirm it is correct.
- Enter the correct mode and try performing the calculation again.

If the above steps do not correct the problem, press the **ON** key. The calculator performs a self-check operation and deletes all data stored in memory if any abnormality is detected. Make sure you always keep written copies of all important data.

#### Error Messages

The calculator is locked up while an error message is on the display. Press **AC** to clear the error, or press **◀** or **▶** to display the calculation and correct the problem. See “Error Locator” for details.

#### Math ERROR

- Causes
  - Calculation result is outside the allowable calculation range.
  - An attempt to perform a function calculation using a value that exceeds the allowable input range.
  - An attempt to perform an illogical operation (division by zero, etc.)
- Action
  - Check your input values and make sure they are all within the allowable ranges. Pay special attention to values in any memory areas you are using.

#### Stack ERROR

- Causes
  - The capacity of the numeric stack or operator stack is exceeded.
- Action
  - Simplify the calculation. The numeric stack has 10 levels and the operator stack has 24 levels.
  - Divide your calculation into two or more separate parts.

#### Syntax ERROR

- Cause
  - An attempt to perform an illegal mathematical operation.
- Action
  - Press **◀** or **▶** to display the calculation with the cursor located at the location of the error and make required corrections.

#### Arg ERROR

- Cause
  - Improper use of an argument
  - Action
- Press  $\leftarrow$  or  $\rightarrow$  to display the location of the cause of the error and make required corrections.

■ **Order of Operations**

Calculations are performed in the following order of precedence.

- ① Coordinate transformation: Pol (x, y), Rec (r,  $\theta$ )
  - ② Type A functions:  
With these functions, the value is entered and then the function key is pressed.  
 $x^3, x^2, x^{-1}, x!, \sqrt{\quad}, \sqrt[3]{\quad}$   
 $x, x1, x2, \sqrt{\quad}$   
Angle unit conversions
  - ③ Powers and roots:  $\wedge (x^y), \sqrt{x}$
  - ④  $a^b/c$
  - ⑤ Abbreviated multiplication format in front of  $\pi$ , e (natural logarithm base), memory name, or variable name:  $2\pi, 5A, \pi$  A etc.
  - ⑥ Type B functions:  
With these functions, the function key is pressed and then the value is entered.  
 $\sqrt{\quad}, \sqrt[3]{\quad}, \log, \ln, e^x, 10^x, \sin, \cos, \tan, \sin^{-1}, \cos^{-1}, \tan^{-1}, \sinh, \cosh, \tanh, \sinh^{-1}, \cosh^{-1}, \tanh^{-1}, (-)$
  - ⑦ Abbreviated multiplication format in front of Type B functions:  $2\sqrt{3}, \text{Alog2}$  etc.
  - ⑧ Permutation and combination: nPr, nCr
  - ⑨  $\times, \div$
  - ⑩  $+, -$
- Operations of the same precedence are performed from right to left.  $e^x \ln \sqrt{120} \rightarrow e^x \{ \ln (\sqrt{120}) \}$
  - Other operations are performed from left to right.
  - Operations enclosed in parentheses are performed first.

■ **Stacks**

This calculator uses memory areas, called “stacks,” to temporarily store values (numeric stack) and commands (command stack) according to their precedence during calculations. The numeric stack has 10 levels and the command stack has 24 levels. A stack error (Stack ERROR) occurs whenever you try to perform a calculation that is so complex that the capacity of a stack is exceeded.

● Example:

$$2 \times ( ( 3 + 4 \times ( 5 + 4 ) \div 3 ) \div 5 ) + 8 =$$

Numeric Stack

①	2
②	3
③	4
④	5
⑤	4
⋮	

Command Stack

1	×
2	(
3	(
4	+
5	×
6	(
7	+
⋮	

- Calculations are performed in sequence according to “Order of Operations”. Commands and values are deleted from the stack as the calculation is performed.

■ **Input Ranges**

Internal digits: 12  
Accuracy\*: As a rule, accuracy is  $\pm 1$  at the 10th digit.

Functions	Input Range	
sinx	DEG	$0 \leq  x  \leq 4.499999999 \times 10^{10}$
	RAD	$0 \leq  x  \leq 785398163.3$
	GRA	$0 \leq  x  \leq 4.499999999 \times 10^{10}$
cosx	DEG	$0 \leq  x  \leq 4.500000008 \times 10^{10}$
	RAD	$0 \leq  x  \leq 785398164.9$

	GRA	$0 \leq  x  \leq 5.000000009 \times 10^{10}$
tanx	DEG	Same as sinx, except when $ x  = (2n-1) \times 90$
	RAD	Same as sinx, except when $ x  = (2n-1) \times \pi/2$
	GRA	Same as sinx, except when $ x  = (2n-1) \times 100$
$\sin^{-1}x$	$0 \leq  x  \leq 1$	
$\cos^{-1}x$	$0 \leq  x  \leq 1$	
$\tan^{-1}x$	$0 \leq  x  \leq 9.999999999 \times 10^{99}$	
sinhx	$0 \leq  x  \leq 230.2585092$	
coshx	$0 \leq  x  \leq 230.2585092$	
$\sinh^{-1}x$	$0 \leq  x  \leq 4.999999999 \times 10^{99}$	
$\cosh^{-1}x$	$0 \leq  x  \leq 4.999999999 \times 10^{99}$	
tanhx	$0 \leq  x  \leq 9.999999999 \times 10^{-1}$	
$\tanh^{-1}x$	$0 \leq  x  \leq 9.999999999 \times 10^{-1}$	
logx/lnx	$0 < x$	
$10^x$	$-9.999999999 \times 10^{99} \leq x \leq 99.99999999$	
$e^x$	$-9.999999999 \times 10^{99} \leq x \leq 230.2585092$	
$\sqrt{x}$	$0 \leq x < 1 \times 10^{100}$	
$x^2$	$ x  < 1 \times 10^{50}$	
1/x	$ x  < 1 \times 10^{100} \quad x \neq 0$	
$\sqrt[3]{x}$	$ x  < 1 \times 10^{100}$	
x!	$0 \leq x \leq 69$ (x is an integer)	
nPr	$0 \leq n \leq 99, r \leq n$ (n, r are integers) $1 \leq \{ n! (n-r)! \} \leq 9.999999999 \times 10^{99}$	
nCr	$0 \leq n \leq 99, r \leq n$ (n, r are integers)	
Pol (x, y)	$ x ,  y  \leq 9.999999999 \times 10^{49}$ $(x^2 + y^2) \leq 9.999999999 \times 10^{99}$	
Rec (r, $\theta$ )	$0 \leq r \leq 9.999999999 \times 10^{99}$ $\theta$ : Same as sinx	
$\circ, \prime, \prime\prime$	$ a , b, c < 1 \times 10^{100}$ $0 \leq b, c$	
$\circ, \leftarrow, \prime, \prime\prime$	$ x  < 1 \times 10^{100}$ Decimal $\leftrightarrow$ Sexagesimal Conversions $0^\circ 0' 0'' \leq  x  \leq 999999^\circ 59'$	
$\wedge (x^y)$	$x > 0: -1 \times 10^{100} < y \log x < 100$ $x=0: y > 0$ $x < 0: y = n, \frac{1}{2n+1}$ (n is an integer) However: $-1 \times 10^{100} < 1/x \log  y  < 100$	
$\sqrt[3]{y}$	$y > 0: x \neq 0$ $-1 \times 10^{100} < 1/x \log  y  < 100$ $y = 0: x > 0$ $y < 0: x = 2n+1, \frac{1}{n}$ (n $\neq$ 0, n is an integer) However: $-1 \times 10^{100} < 1/x \log  y  < 100$	
$a^b/c$	Total of integer, numerator, and denominator must be 10 digits or less (including division marks).	
SD (REG)	$ x  < 1 \times 10^{50} \quad x \sigma n, y \sigma n, \bar{x}, \bar{y}$ $ y  < 1 \times 10^{50} \quad A, B, r: n \neq 0$ $ n  < 1 \times 10^{100} \quad x \sigma n-1, y \sigma n-1: n \neq 0, 1$	

\* For a single calculation, calculation error is  $\pm 1$  at the 10th digit. (In the case of exponential display, calculation error is  $\pm 1$  at the last significant digit.) Errors are cumulative in the case of consecutive calculations, which can also cause them to become large. (This is also true of internal consecutive calculations that are performed in the case of  $\wedge (x^y), \sqrt[3]{y}, x!, \sqrt[3]{y}$ ,

nPr、nCr etc.)

In the vicinity of a function's singular point and point of inflection, errors are cumulative and may become large.

### Replacing the Battery

Dim figures on the display of the calculator indicate that battery power is low. Continued use of the calculator when the battery is low can result in improper operation. Replace the battery as soon as possible when display figures become dim.

- ① Press **SHIFT** **OFF** to turn off power.
- ② Put the switch to the right position to unlock the battery cover then pull out the battery cover.
- ③ Take out the old battery.
- ④ Place the new battery into the machine with positive pole upward.
- ⑤ Close the battery cover and put the switch back to the left position to lock the battery cover.
- ⑥ Pressing On key to turn on the power.

### Power off Automatically:

When no key is pressed for 6 minutes under Power On situation, calculator will be powered off automatically. Press **ON** to turn on the machine again.
